Our May 6, 2021 virtual event will take a deep dive look at **Global Trends in Digital Infrastructure** with help from Senior Executives and Experts. Five trends are impacting today's digital transformation challenges increasing the need for interconnection.

- **Digital Business:** Moving to fully digitized services is now more crucial than ever. As new demand for distributed digital engagement rises, businesses need to solve remote workforce, network efficiency and workflow latency issues.
- **Urbanization:** Businesses need wider distribution of services to enhance local interaction. As population centers grow, businesses will have greater demands for distributed compute, and will need to manage the complexities of localization.
- **Cybersecurity:** Cyberthreats are accelerating. As the number of user devices and cloud resources increases, organizations must solve for distributed security risks.
- **Data Volumes & Compliance:** Growth of localized data is outpacing the ability to manage it. Most of the world's ever-increasing data volumes are not being leveraged for actionable insights.
- **Business Ecosystems:** Connectivity to multiple ecosystems is key to growth and innovation. API-driven application exchange issues, real-time engagement, multiparty workflows and dynamic service chains require on-demand connectivity to a variety of ecosystems at the lowest latency.
